

# Agile Management in a Business Environment

**DURATION: 2 Days**

**Technical: 8**

**Leadership: 5**

**Strategic: 3**

---

**TOTAL PDU: 16**

## **COURSE OVERVIEW**

Traditionally Agile and Scrum have always been associated with IT development. However, more and more businesses understand that the principles of Agile have a much wider area of use. Many business processes outside IT, can strongly benefit from a more Agile approach.

This training program is created for those who believe in and want to know more about applying agile principles and practices to their business processes. It highlights agile approaches such as SCRUM, LEAN and Kanban. It will focus on the essential knowledge necessary to understand Agile and to decide how applicable it is to the business the participants are involved in. The program will also examine what hybrid forms are possible if pure Agile is not the best option.

## **TARGET AUDIENCE**

This course is designed for persons who have business experience and are keen to understand the application of Agile principles, tools and techniques to their business. The participants can include Senior Management, Business Strategists, Transformation Department, etc.

## **LEARNING OUTCOME**
